BC2018-353

Department of Information Technology

Starfish ETL is a software tool that is used to add, update and export data. It has preconfigured connectors to a large selection of third party software. It allows for easy and accurate movement of data between these software products. We will be using this software to build and maintain our data within our new Infor CRM application.

We need a way to accurately move our data between our legacy systems and Infor CRM. Infor CRM advises business's not to directly update the backend database structures. They recommend using an ETL tool designed to work with their CRM software.

Starfish ETL will allow us to easily and accurately move our data between our legacy systems and Infor CRM. Without the ETL tool to move data between systems our CRM data will become stale and will cause our customer service staff to enter newer data into CRM manually.

A recommendation from our implementation vendor TIA. They are using Starfish ETL to do our initial load. They offered to turn over the mapped connection they created in the ETL tool to us to continue the updating process. This will save us from having to do this development.

A competitive process was not used because this is a 12month subscription and this vendor is implementing the CRM solution. This is an on-going subscription-based service. We can discontinue service at any time if another option becomes available.
